

Nexperia
Hamburg
Deutschland

Dear Hiring Manager,

I would like to apply for the position of Working Student - Electronic Lab / Simulation. With a background in electrical engineering and two years of experience in business intelligence, I have a solid technical background and a keen analytical mindset.

Currently, I am seeking a Master's Thesis topic while pursuing my Master's degree in MEMs at the esteemed TUHH. Here, I have specialized in SemiTec, hence in analog semiconductor functionality, and gained substantial experience with schematic simulation: LTSpice, Software Programming: Python, VBA, C, and simulation modeling: Simulink & Cadence. My experience with Analog & Digital Circuits, including passive RLC filters and Electrical measurement experience from my BSc in Electrical Engineering, as evidenced by my thesis on Grid-Connected Inverters, further strengthens my qualifications for this role.

In my previous organization, I was part of a Project in RFID for WIP & Warehouse Management and did extensive research on Process improvement. For this, I needed to travel to Poland Warehouse, where I developed practical interpersonal communication skills. I am fluent in English and have a German level of B2. Moreover, I dissected data using Python and SQL and created detailed reports and dashboards on Tableau and Power BI. In addition, while I was in Kalmar, I evaluated & maintained Machine & Customer data using SAP and Excel (VBA).

I am drawn to this role because it provides a unique opportunity to gain experience in Nexperia's semiconductor development process and ESD Protection Device models. My background, skills, and passion for SemiTec and Microelectronics make me a befitting candidate for this position.

I look forward to the possibility of discussing my application further and am available for an interview at your earliest convenience. Thank you for considering my application.

Sincerely,

Himadri Joy Bepari
